Smart Campus Event Management System

SDG: SDG 4 – Quality Education

Presented By:

Batthina Jayanthi– VTU25786 – 23UECS0951

Courses Handling Faculty:

Dr. Hafizur Rahman-Associate Professor

INTRODUCTION

1

❑ In today's digital era, managing campus events manually leads to inefficiency, data loss, and lack of proper coordination among students and organizers.

2

❑ Many institutions rely on scattered information sources, which creates confusion and makes it difficult for students to stay updated about upcoming events.

3

4

❑ There is a growing need for a centralized system that provides structured event management with real-time access and easy participation.

5

❑ The **Campus Event Management System** is a full-stack web application designed to allow administrators to create, manage, and monitor events efficiently.

6

❑ The system enables students to view available events, register for them, and access event-related details in a user-friendly interface.

7

❑ The application uses a database system (MySQL) to maintain structured data for events, users, and registrations.

8

❑ The system is developed using Spring Boot, Java, MySQL, HTML, CSS, and Bootstrap, ensuring a responsive and dynamic web application.

9

PROBLEM STATEMENT

1

2

3

4

5

6

7

8

9

In today's fast-paced campus environment, managing events manually is inefficient and often leads to poor communication and missed opportunities for students. Many institutions rely on notice boards or scattered online updates, which makes it difficult for students to stay informed about upcoming events. There is no centralized system to manage event details, registrations, and participant tracking, creating challenges for administrators in organizing and maintaining records. Additionally, the lack of secure authentication can result in unauthorized access and data inconsistencies. Students also do not have a simple platform to explore and register for events easily. Therefore, there is a need for a centralized, secure, and user-friendly web-based Campus Event Management System that allows administrators to manage events efficiently and enables students to view and register for events seamlessly.

OBJECTIVE(S)

1

2

3

❑ To design and develop a responsive web-based **Campus Event Management System** that allows administrators to create and manage events, and enables students to view and register for events easily using modern web technologies.

4

❑ To implement secure authentication and CRUD operations for managing events and registrations, ensuring safe access, efficient data handling, and a user-friendly experience through a relational database system.

5

6

7

8

9

PROPOSED SYSTEM

❑ **Complete Event Management Solution –**

The Campus Event Management System is a web-based full-stack application that allows administrators to create, manage, and organize events while enabling students to view and register — providing a complete platform for campus event handling.

❑ **Secure Authentication –**

Implements admin login and session management to ensure only authorized users can add, update, or delete events, protecting system data.

❑ **Dynamic Event Management –**

Events are stored in a database and displayed dynamically, allowing students to view event details and register in real time.

❑ **Relational Database Structure –**

Maintains relationships between Events and Registrations using a structured database for consistency and efficient data management.

❑ **Student Registration System –**

Students can easily register for events by providing basic details, and registrations are stored and managed efficiently.

❑ **How it Solves Existing Problems –**

- Provides a centralized platform for all campus events
- Eliminates confusion from scattered information
- Ensures secure admin control
- Simplifies event registration process
- Improves student participation and engagement

❑ **Key Advantages –**Secure Authentication, Centralized Event System, Easy Registration, Real-time Updates, User-Friendly Interface, Scalable Architecture.

TECHNOLOGIES USED

1

2

❑ **Frontend:** HTML, CSS, Bootstrap , JavaScript

3

❑ **Backend:**Java, Spring Boot, Spring MVC, CRUD Operations, Authentication Logic

4

❑ **Database:**MySQL, Events Table, Registrations Table, Relational Mapping (Foreign Key)

5

❑ **Tools:**Eclipse / VS Code, Maven, Spring Boot DevTools, Web Browser

6

7

❑ **Hardware Requirements:** Minimum 4GB RAM, 20GB free storage, Intel i3 processor or above

8

❑ **Software Requirements:**Windows / Linux / macOS, Java 17 or above, Spring Boot, MySQL Server, Modern Web Browser

9

MODULE DESCRIPTION

Module 1:Admin Authentication & Management

This module handles secure admin login and session management. It ensures that only authorized administrators can access the system to add, update, and delete events. It also supports role-based access control to maintain system security and data integrity.

Module 2: Event Management

This module manages all event-related operations such as adding, viewing, updating, and deleting events. It stores details like event name, department, type, date, and description. Events are dynamically displayed for students to browse and access easily.

Module 3:Registration Management

This module handles the event registration process where students can register for events. It maintains the relationship between events and participants in the database and ensures accurate storage and tracking of all registrations.

Module 4:Event Viewing & Dashboard Module

This module allows students to view available events and their details through a user-friendly interface. It provides search and filtering options, displays registration status, and shows confirmation or error messages. The admin dashboard enables monitoring of events and registered users.

Event Viewing & Dashboard Module

This module allows students to view available events and their details through a user-friendly interface. It provides search and filtering options, displays registration status, and shows confirmation or error messages. The admin dashboard enables monitoring of events and registered users.

ADVANTAGES & LIMITATIONS

1

Advantages:

- Simple and user-friendly interface for easy event browsing and navigation
- Secure admin authentication system for controlled access
- Efficient relational database structure ensuring data integrity
- Supports CRUD operations for managing events and registrations
- Centralized platform for all campus events
- Responsive design compatible with desktop and mobile devices

2

3

4

5

6

7

8

9

Limitations:

- No payment gateway integration for paid events
- Limited advanced features like notifications or live updates
- Application runs locally and is not deployed on the cloud
- No advanced analytics or reporting dashboard
- Limited multi-user role management (only basic admin access).

Thank you
